Thermo-Flo™ LC8X Remote Flow Controller

**Application**

The general purpose flow controller is offered in two configurations for low-flow pump and process protection. The LC80 accepts one flow sensor input and provides one 10A relay for low flow control. The LC82 accepts two flow sensor inputs and provides two 10A relays for dual low flow control. Package this flow controller with our liquid or gas flow switch sensors. For field mount installation, add a single or dual controller NEMA box.

**Features**

- Fail-safe relay control of pumps or valves with 0-60 second delay
- Easy setup with LED indicators for sensor, power and relay status
- 35 mm DIN rail mount polypropylene enclosure with removable terminal strips
- Invert switch changes relay state from NO to NC without rewiring

**Key Benefits**

- Connects to all Flowline Flow switches (FT10/GT10)
- Mounts easily in control panel
- Switches loads up to 10 Amps including valves, horns, buzzers, etc.

**Compatible Products**

**Thermo-Flo™ FT10/GT10 Liquid & Gas Flow Switch Sensors**

**Application**

Offered in liquid and gas sensor types, the general purpose flow switch provides reliable low or no-flow detection of relatively clean, non-coating media with one 1A relay output. Liquid examples include water and acetic acid. Available in Polypropylene-Ryton® and PVDF, the short flow sensor is used in pipe or ducting from 1/2” to 1 1/2”, and the long flow sensor is used in 2” and up. The flow switch set point may be adjusted from 0.04 to 3 fps in liquids, or 1 to 90 fps in gases as a low-flow alarm. The flow sensor is best applied in applications with relatively constant temperature.
