

EchoPro® LR26

Pulse Radar Liquid Level Transmitter

Application

The intrinsically safe 6.3 GHz. pulse radar transmitter provides continuous level measurement up to 114.8' (35m) with a 4-20 mA analog signal output, and is configured via its integral push button display module or WebCal software. The non-contact liquid level sensor is intended for chemical and petroleum storage or process applications in above grade metal or reinforced concrete tanks or below grade tanks of any material. Select this sensor for **extreme process conditions** with corrosive or low dielectric media, heavy surface foam or agitation, higher pressure, steam, condensation or vapor, and installation in a flange fitting. Due to the wider beam angle, special attention should be given to ensure that the sensor is located with unobstructed measurement space. Typical applications include process tanks.

Features

- 316L antenna with PTFE inner shield for corrosive media
- Configuration via push button display or WebCal software
- 6.3 GHz. pulse radar is unaffected by most foam and agitation
- 12" (30cm) dead band enables utilization of the entire tank
- LCD displays level in feet or meters with percent of span bar
- Optional display mode indicates the echo signal return curve
- Fail-safe diagnostics with selectable signal fail-safe outputs
- Recognition, storage and rejection of false echo signal returns
- IP67 stainless enclosure with polycarbonate display window

Performance

The LR26 features a wide beam, low frequency, 6.3 GHz. pulse radar measurement that's unaffected by most process conditions, and is the right choice for extreme applications with significant foam, agitation, steam or pressure. Given the wide beam angle, care should be taken to ensure that the installed sensor has plenty of unobstructed measurement space.
