

Addendum for LR30 & LR31 Series

LR30 & LR31 SERIES SENSOR TO LR98 DISPLAY

The LR98 display is used with the LR30 or LR31 sensor for configuration of the sensor. The Cable has changed from an 8-wire cable to a 6-wire cable. Please review the wiring changes below.

Once the EchoPulse LR30 or EchoPro LR31 has been configured, you can bypass the LR98 and wire the White and Black wires directly to any device that accepts a 4-20mA signal. The example below shows the LR30 wired to a multimeter set to read the 4-20mA current output of the sensor.
